

Oswaldo Morales Avila Testimonial

What is your name?

My name is Oswaldo Morales Avila and I am a student of the course offered here. The luck that I've had is that I have a professor who gave me classes on construction, agriculture, and related subjects. This helps me achieve my goals and prepare for the future.

How did you hear about this course?

I heard about it in a brochure that they handed out in my neighborhood. After reading the brochure I saw that it was related to my current job and I realized it was something important for my career and my future, and it would help me climb the ladder of my job.

What did you think about the class?

I thought it was excellent, there was a great dynamic. You have a professor who gives you a great introduction, gives you all the guidelines you need to improve in your work path, a lot of formal instruction about the subject as well. It's great because it gives you a lot of information for your career. I appreciate the security it gives us to continue learning in our field.

What are you hoping to do once you have the card?

Well, having the card is really a confidence booster. With that, you can open yourself to the entire sector of labor. It's a representation of being able to get a job in whichever area, whether that be agriculture, construction, it's widespread what it gives you.

In which specific area would you like to work?

I'd like to work as an electrician, within the field of construction, that's sort of what I've studied. That opens up doors in construction, but also it's a very general skill that applies to all aspects of life.

What would you say to unemployed people who haven't heard of this course?

Well, this course is the first step where a person is able to open pathways in this field, it's a credential which opens doors. I think it's very important to start here.

I'd recommend this course to all citizens, to all people, and all the young people. This course will open your eyes to be able to develop your skills in the labor system.
